

Western Reflections External Wrought Iron

Western Reflections' Belle Meade external wrought iron products are designed to provide the Old World appearance of elegant external bars. Belle Meade is made of rust-resistant material and finished in a matte black powder coat finish for beauty and ease of care.

Cleaning

Belle Meade units can be cleaned with a mild liquid dishwashing detergent diluted in warm water. Using a clean soft cloth soaked in diluted dish detergent, gently wipe the surfaces by moving the cloth along the length and width of the wrought iron bars. This will remove most accumulated dirt and debris. Be careful not to allow the cloth to get caught on corners or welded center designs. Rinse thoroughly and allow to air dry. Cleaning steps should be taken when temperatures will remain above freezing for 24 hours to allow adequate drying.

CAUTION: Excessive rubbing or use of an abrasive cleaner or cloth may remove the matte appearance of the finish.

Touchup

Should chips appear along the surface of the external bars, touch them up with matte black touchup paint designed for use on powder coat paint. This will help keep the bars sealed and prevent rust. In the event of rust, lightly sand the impacted area with medium grit sandpaper designed for use on metal. After removal of rust, follow cleaning and touchup instructions above.
